

Hydrocarbon Measurement Process Digitalization for Operational Efficiency

FOCQUS
CORPORATE

About Us

At FocQus, we provide a complete, end-to-end solution for hydrocarbon measurement and data management, uniquely combining technical expertise, regulatory and contractual compliance with advanced digital capabilities from a single company.

Our approach ensures that every stage of the measurement lifecycle — from system design and implementation to daily operation, optimization, and enterprise-wide integration — is seamlessly connected. Clients benefit from precise, standard compliant, traceable measurement data, fully auditable processes, streamlined operations, reduced operational risk, and safeguarded revenues.

By delivering reliable, transparent, and actionable information, FocQus enables smarter, data-driven decision-making, turning complex measurement and production processes into a source of confidence and continuously improving efficiency.

Our History

2008

FocQus in Brazil

Jorge Rosado, CEO, draws on years of O&G expertise to start operations in Brazil.

2010

FocQus in Perú

FocQus expands to Peru. Start serving government entities overseeing production.

2014

Flow Data Management

Information Systems division to meet local regulation requirements. Flow Measurement System (FMS) implemented in Brazil.

2013

Asset Management

First version of FocQus' proprietary Measurement Management System (MMS) completed.

2012

"XMS" Project

FocQus ventures into Information Technology systems, supported by teams in Brazil, Colombia and Peru.

2015

Compliance Management

Compliance Management System (CMS) added to integrate inspections and audits based on ISO 10012 standard.

2016

Solutions Integration

All systems integrated into a total management system, for metrological and measurement activities in compliance with standards.

2017

FocQus in NAM

Incorporates in North America to address the need for independent flow measurement consulting services.

Today's Fundamental Needs

Reliable
Measurement Data

Data Analysis
& Results Reporting

Integration, Distribution
& Data Storing

Optimization Of
Operational Cost

Compliance

What If We Could

Integrate and execute all operational and supporting activities under a **MEASUREMENT MANAGEMENT SYSTEM**.

This is Exactly What We Do at FocQus

How We Do It

Two Technical Divisions. One Integrated Approach and Solution

FocQus is structured into two specialized divisions working to integrate powerful and field-tested solutions. The result is practical, standards-compliant solutions, grounded in engineering.

Information Technology Engineering

The FocQus IT Division empowers clients to digitalize and streamline hydrocarbon measurement, production data, and allocation workflows, transforming complex processes into reliable, efficient, and transparent operations.

By integrating advanced metering data acquisition, multi-stage validation, and high-performance data management architectures, our platforms give clients continuous access to accurate, traceable, and audit-ready information.

Built for secure, standards based interoperability, our systems connect seamlessly with enterprise platforms such as SCADA, Process Historian, BI systems and others, ensuring that measurement data flows reliably with them.

Support with expert technical assistance, FocQus IT solutions enable clients to achieve regulatory and contractual compliance, operational efficiency, and smarter, data-driven decision-making across the entire enterprise.

Metering Consultancy

At FocQus, our Consultancy Division helps clients transform hydrocarbon measurement into a source of confidence, compliance, and efficiency. We support the full lifecycle of measurement systems — from conceptual design to daily operation and long-term optimization — ensuring every decision reduces risk and maximizes value.

By combining metrological accuracy, regulatory compliance, and operational efficiency, we deliver more than recommendations: we provide actionable strategies that safeguard revenues and protect reputations.

Our services include technical-legal advisory, standards-based audits, and hands-on support during implementation, solutions aligned with ISO, API, OIML, and corporate requirements. Clients benefit from transparent, auditable processes and solutions all aligned with ISO, API, OIML standards and corporate requirements.

Where We Are

- International Presence
- Solid Operational Track Record
- Decade Long Expansion
- Multinational team

Who We Serve

- Exploration & Production companies.
- O&G Pipeline Operators.
- Power Generators.
- Regulators & Government Agencies.
- Engineering & EPC Companies.
